Homework #1 – Testing a Website

TUDOSE RAREȘ

Website #1 – Demo Blaze

Demo Blaze is a fictional e-commerce web application frequently used for practicing both manual and automated software testing. It simulates an online store selling products such as phones, laptops and monitors.

Additional Testing Techniques Used

- **Exploratory testing** is a hands-on software testing approach where testers simultaneously learn about the application, design tests, and execute them without using predefined scripts or test cases (practitest.com). I used this technique by freely navigating through the main flow of the site (viewing a product -> adding to cart -> checkout) to understand the platform's architecture and identify atypical UI behaviors such as quantity management (Bug report #3).
- **Error guessing** is an informal, experience-based software technique where testers use their intuition, past bug history, and domain knowledge to anticipate where a system might fail (geeksforgeeks). I used this method to directly attack the input forms (contact and place order), trying to submit empty data or incorrect data types (letters instead of numbers), knowing that client-side data validation is a source of errors encountered on multiple websites (Bug report #1 and Bug report #2).

Bug reports

Bug report #1: Contact form allows sending empty messages

Summary: "Contact" form does not validate mandatory fields.

Steps to reproduce:

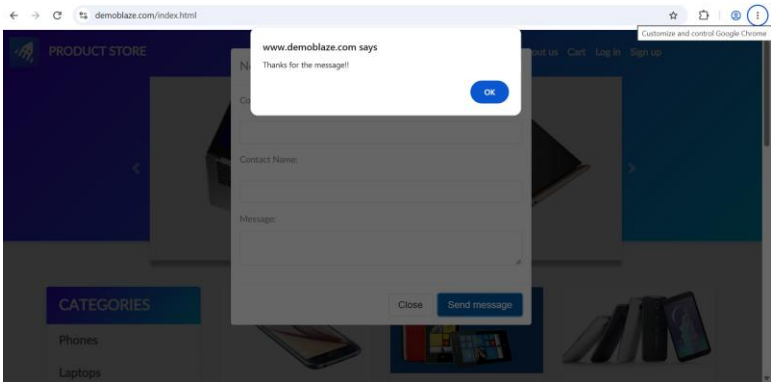

1. Open the website and head to the home page https://www.demoblaze.com/index.html.
2. Click on the "Contact" link in the top navigation menu.
3. Leave the "Contact Email", "Contact Name", and "Message" fields completely empty.
4. Click the "Send message" button.

Expected result: The system should display specific error messages (e.g. “Email is required”) and block the form submission.

Actual result: The system accepts the empty form and displays the success alert “Thanks for the message!!”.

Severity: High Impact

Evidence: Attached is a screenshot showing the unfilled form in the background and the success message.

Bug report #2: Missing validation for the “Credit card” field when placing an order

Summary: ”Place order” form accepts alphabetical characters in the “Credit card” field.

Steps to reproduce:

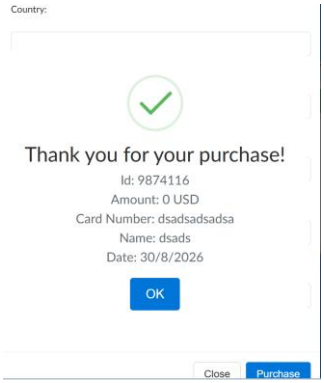

1. Open the website and head to the home page https://www.demoblaze.com/index.html.
2. Navigate to the “Cart” section from the top menu.
3. Fill in the “Name” field with whatever characters.
4. Fill in the “Credit card” field with alphabetical characters (e.g. “sbdsa”).
5. Click the “Purchase” button.

Expected result: The system must reject the alphabetical input, request a valid card number and block the checkout process.

Actual result: The order is successfully processed and the system displays the message “Thank you for your purchase!”

Severity: High Impact

Evidence: Attached is a screenshot showing the “Credit card” field with alphabetical characters in the background and the success message.

Bug report #3: Duplicated rows in the cart for the same product

Summary: Adding the same product multiple times creates separate cart entries instead of updating the quantity.

Steps to reproduce:

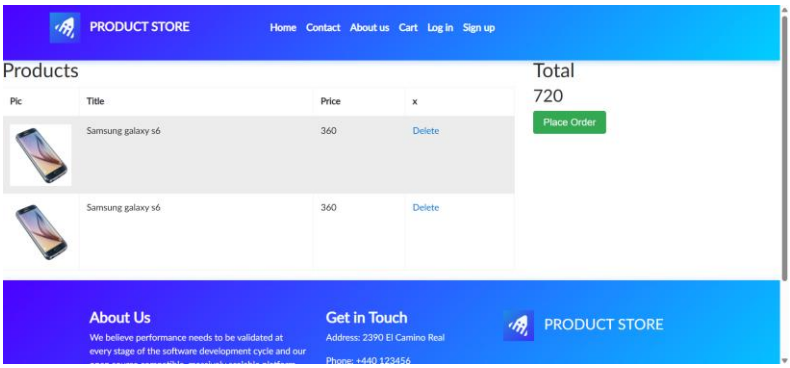

1. Open the website and head to the home page https://www.demoblaze.com/index.html.
2. Click on the “Samsung Galaxy S6” product.
3. Click on “Add to cart” and accept the confirmation alert.
4. Return to the homepage (Home button).
5. Click again on the same “Samsung Galaxy S6” product.
6. Click on “Add to cart” and accept the alert.
7. Navigate to the “Cart” page.

Expected result: The “Samsung Galaxy S6” product should appear in a single row, with a visual indicator for “Quantity: 2”.

Actual result: The product appears on two separate rows in the shopping cart table, taking up unnecessary screen space.

Severity: Minor Impact

Evidence: Attached is a screenshot of the shopping cart table.

Test cases

Test case #1: Viewing the details of a specific product

ID: 001.

Purpose: Verify the correct display of the product page.

Preconditions: Internet access, browser (any browser, anu version available) open on the Demoblaze homepage, any device connected to the internet.

Steps:

1. In the “Categories” section, click on “Laptops”.
2. Click on the product title “Sony Vaio i5”

Expected result: The user is redirected to the product page. The displayed elements include: the laptop’s image, the exact title “Sony Vaio i5”, the price of “$790”, a detailed description of the technical specifications and the “Add to cart” button.

Test case #2: Filtering products by categories

ID: 002.

Purpose: Verify the functionality of the category sidebar menu.

Preconditions: Internet access, browser (any browser, anu version available) open on the Demoblaze homepage, any device connected to the internet.

Steps:

1. On the homepage, locate the “CATEGORIES” menu on the left side.
2. Click on the “Monitors” category.

Expected result: The product list displayed on the screen updates to exclusively show monitors (e.g. Asus FULL HD). Products from the “Phones” or “Laptops” categories disappear from the list.

Test case #3: Deleting a product from the shopping cart

ID: 003.

Purpose: Verify the functionality of removing a previously added item from the cart.

Preconditions: Internet access, browser (any browser, anu version available) open on the Demoblaze homepage, any device connected to the internet. There is at least one product added to the “Cart” page. In this test case, we’ll choose “Nokia lumia 1520” to be already added.

Steps:

1. Click on the “Cart” section in the navigation menu.
2. Identify the row corresponding to the “Nokia lumia 1520” product.
3. Click the “Delete” button located on the same row.

Expected result: The row containing the product instantly disappears from the table and the cart’s total value is either recalculated or becomes empty if it was the only product.
